

PathWays Plus

PathWays Plus is a customized service that provides a comprehensive literature review of the routes to a molecule along with a detailed analysis based on commerciality.

ROW2 applies its proprietary statistical analysis to each route thereby predicting its commercial nature then ranks these routes according to the customer's criteria.

"We have evaluated ROW2's new service PathWays plus and are extremely satisfied with the results. The methodology that demarcates commercially scalable routes from routes of academic interest is unparalleled. PathWays Plus helped us reduce development costs and better allocate our resources."

- Head of Chemistry from a major chemical company

PathWays Plus benefits companies by:

- Providing critical information of workable synthetic options that have a high probability of being practiced.
- Ranking of the above routes based on predetermined parameters.
- Helping to reduce development costs and time.
- Assisting with the allocating of resources.
- Eliminating capital investments through the expert analysis of each potential route a company may take to the plant.
- Saving time of performing full literature surveys and commerciality testing.

The **PathWays Plus** Table of Contents typically includes:
