

## RouteIncubator

### Novel Routes, Lab Proven

RouteIncubator is a laboratory service that reduces to practice routes to intermediates or final compounds developed as a part of the RouteDesign project, allowing you to explore more potential routes to your lead compound(s).

RouteIncubator leverages the potential of the non-obvious and commercially scalable chemistry output from our RouteDesign service and increases your ability to provide greater sample quantities of your valuable discovery leads.

RouteIncubator delivers experimental test results on the agreed synthetic pathway(s) to scale the chemistry to larger quantities along with analytical testing on all compounds.

#### Deliverables include:

- Samples of key intermediates and final product
- Detailed experimental procedures with reaction conditions, isolation parameters of product, purifications etc.
- Analysis procedures and results
- List of all reactions conducted including all experiments leading to the final process
- Details on modifications made from the routes suggested in RouteDesign
- Schematic representation of all routes attempted
- Additional synthetic ideas derived from Laboratory Experimentation
- ROW2's views, comments and conclusions

ROW2, in collaboration with lab partners, also has the ability to produce materials from gram to kilo quantities to support your development programs, thereby helping small pharmaceutical companies outsource clinical drug supply and larger organizations free up their resources.

*"ROW2's RouteDesign report gave us novel synthetic routes suitable for commercial scale that we had not considered before, and therefore, added to our team's knowledge. We would definitely use this service again."*
